In 2017, more than **47,500 Americans died** from an opioid-related overdose. This marked a 165 percent increase since 2008 — over double in a decade. *Source: CDC WONDER Database*

Missouri is the only state in the country without a state-legislated PDMP. More than 80 percent of Missourians and 90 percent of providers are covered by the St. Louis County Department of Public Health’s PDMP system. **Unfortunately, there still are more than 50 — primarily rural — counties and municipalities outside of the PDMP network.**

Opioid-Related Hospital Inpatient and ED Visits by County, Fiscal Year 2017

In 2017, there were **954 deaths from motor vehicle accidents** and **957 deaths from opioid overdoses** in Missouri. This marked the first year that opioids claimed more lives than traffic accidents in the state. Since 2000, the rate of Missourians dying from opioids increased **583 percent** while the rate of deaths from traffic accidents decreased by **19 percent.**

**Opioid Dependence Risk**

Estimated with principal component analysis of unemployment, drug-related mortality, morphine milligram equivalents prescribed per capita and hospital utilization for opioid misuse.
