

Better Data. Better Decisions.

Community, Rural and Critical Access Hospital Survival in Today's Cybersecurity World

Three-Part Educational Seminar Series

The cyberthreat to the health care industry has increased dramatically, along with the sophistication of such cyberattacks. Significant incidents continue to plague health care organizations of all types and sizes. The growing number of recent health care-related cyberattacks shows that smaller health providers are falling victim to cybercriminals at an alarming rate.

Session one of the three-part educational series will cover the impact of cybercrime on community hospitals, rural hospitals and critical access hospitals, as well as discuss solutions to help prepare and protect your hospital, your data and your patients from this risk. Online registration is [available](#).

Session 1: The State of Community, Rural and Critical Access Hospitals in a Cybersecurity Threat Environment

Date/Time: 11 a.m. CST Tuesday, March 15

Sessions two and three of the series will highlight the role of hospital leadership and how to reduce your hospital's cybersecurity threat risk with health industry cybersecurity practices. Watch for communication from HIDI on dates and times for the upcoming events.

This seminar series is supported by HIDI, the MHA Rural Hospital Council, MHA Critical Access Hospital Network and ComplyAssistant — a trusted partner for information privacy and security.
