OP-33 Measure Information Form Updates: External Beam Radiotherapy (EBRT) for Bone Metastases

1. The Denominator Criteria now include radiotherapy delivery CPT® codes.

   **Denominator Criteria (Eligible Cases)**
   All patients, regardless of age
   AND
   Bone metastases diagnosis (ICD-10-CM): C79.51, C79.52
   AND
   CPT® Codes: 77402, 77407, 77412

2. The Denominator Exclusions have been updated to include an additional exclusion and ICD-10 codes for spinal cord compression and cauda equina. These ICD-10 codes can be used to remove cases from the sample.

   **Denominator Exclusions:**
   Documentation of medical reason(s) including:
   - Previous radiation treatment to the same anatomic site;
   - Patients treated with radiosurgery or SBRT;
   - Patients who are part of a prospective clinical protocol or registry study;
   - Patients with femoral axis cortical involvement greater than 3 cm in length;
   - Patients who have undergone a surgical stabilization procedure;
   - Patients with spinal cord compression (ICD-10-CM G95.20 or G95.29), cauda equina compression (ICD-10-CM G83.4), or radicular pain.
   **NOTE:** Only the ICD-10 codes listed above can be used to identify denominator exclusions.

   Documentation of patient reason(s) including:
   - Patient declines treatment
   - Economic, social, or religious reasons
